Interviewers were required to make up to a maximum of 10 in-person visits to each household, contact a household member (the “informant”), introduce the study, and generate a listing of all Arabic-speaking Saudi nationals between the ages of 15 and 65 who resided in that household as potential respondent(s).

One eligible male and one eligible female were then randomly selected from this household listing as the designated household respondents.

When the interviewer was not able to contact any household member after three attempts to visit, a “no answer” letter was left at the household that attempted to encourage the household’s cooperation and provide a study telephone number where potential respondents could call to make an appointment for a household visit.

In case the selected respondent refused to participate, a standard resistance letter was sent that thanked the selected respondent for their consideration and requested them to rethink their decision.

Interviewers then revisited the household after a few days to check if the selected respondent had changed his/her mind about participating in the survey.

---

**Socio-demographic characteristics of respondents (n = 80)**

**Gender**
- Male: 60%
- Female: 40%

**Age Range**
- Minimum Age: 15
- Average Age: 34
- Maximum Age: 65

**Marital Status**
- Married: 57.5%
- Divorced: 1.25%
- Widowed: 2.5%
- Single: 38.75%

**Education**
- Did Not Answer: 8.75%
- None: 6.25%
- Primary: 5%
- Secondary (upto 10th grade): 1.25%
- Secondary (upto 12th grade): 18.75%
- Undergraduate: 1.25%
- Graduate: 1.25%

---

Note: *Maximum number of attempts made was 10, only if contact was made in one of these attempts e.g. if respondent was busy, an appointment was scheduled.*

**Abbreviations**
- HH: Household
- IW: Interview
- IWER: Interviewer
